

### EXERCISE SOLVED NUMERICAL

**Q.1** A solution contains 50 g of sugar dissolved in 450 g of water. What is concentration of this solution?

**Given Data:**

Mass of sugar solute = 50g  
Mass of water solvent = 450g

**Required:**

Concentration of solution (% m/m) = ?

**Solution:**

$$\% \text{ m/m} = \frac{\text{Mass of solute (g)}}{\text{Mass of solute (g)} + \text{Mass of solvent (g)}} \times 100$$

**Solution:**

$$\begin{aligned} \% \text{ m/m} &= \frac{50\text{g}}{50\text{g} + 45\text{g}} \times 100 \\ &= \frac{50\text{g}}{500\text{g}} \times 100 \end{aligned}$$

Thus,

$$\% \text{ m/m} = 10\% \text{ m/m}$$

**Q.2** If 60 cm<sup>3</sup> of alcohol is dissolved in 940 cm<sup>3</sup> of water, what is concentration of this solution?

**Given Data:**

Volume of alcohol solute = v = 60 cm<sup>3</sup>  
Volume of water solvent = v = 940 cm<sup>3</sup>

**Required Data:**

Concentration of solution (% v/v) = ?

**Formula:**

$$\% \text{ v/v} = \frac{\text{volume of solute (cm}^3\text{)}}{\text{volume of solute (cm}^3\text{)} + \text{volume of solvent (cm}^3\text{)}} \times 100$$

**Solution:**

$$\begin{aligned} \% \text{ v/v} &= \frac{60\text{cm}^3}{60\text{cm}^3 + 940\text{cm}^3} \times 100 \\ &= \frac{60\text{cm}^3}{1000\text{cm}^3} \times 100 \end{aligned}$$

Thus

$$\% \text{ v/v} = 6\% \text{ v/v}$$

**Q.3** How much salt will be required to prepare following solutions (atomic mass: K=39; Na=23; S=32; O=16 and H=1)

- 250 cm<sup>3</sup> of KOH solution of 0.5 M
- 600 cm<sup>3</sup> of NaNO<sub>3</sub> solution of 0.25 M
- 800 cm<sup>3</sup> of Na<sub>2</sub>SO<sub>4</sub> solution of 1.0 M

**Ans:**

- 250cm<sup>3</sup> of KOH solution of 0.5M

**Given Data:**

Molarity of solution = (M) = 0.5 M

$$\text{Volume of solution} = 250 \text{ cm}^3 = \frac{250}{1000} \text{ dm}^3 = 0.25 \text{ dm}^3$$

$$\text{Molar mass of KOH} = 39 + 16 + 1 = 56 \text{ g mol}^{-1}$$

**Required Data:**

$$\text{Mass of KOH} = ?$$

**Solution:**

$$\text{Molarity} = \frac{\text{Mass of solute (g)}}{\text{Molar mass of solute (g mol}^{-1}) \times \text{volume of solution (dm}^3\text{)}}$$

$$0.5 \text{ M} = \frac{\text{Mass of solute (g)}}{56 \text{ g mol}^{-1} \times 0.25 \text{ dm}^3}$$

$$\begin{aligned} \text{Mass of solute} &= 0.5 \times 56 \times 0.25 \\ &= 7 \text{ g} \end{aligned}$$

**(b) 600 cm<sup>3</sup> of NaNO<sub>3</sub> solution of 0.25M**

**Given Data:**

$$\text{Molarity of NaNO}_3 \text{ solution} = (M) = 0.25 \text{ M}$$

$$\text{Volume of solution} = 600 \text{ cm}^3 = \frac{600}{1000} = 0.6 \text{ dm}^3$$

$$\begin{aligned} \text{Molar mass of NaNO}_3 &= 23 + 14 + 3(16) \\ &= 85 \text{ g mol}^{-1} \end{aligned}$$

**Required:**

$$\text{Amount of NaNO}_3 = m = ?$$

**Solution:**

**Using the formula:**

$$\text{Molarity} = \frac{\text{Mass of solute (g)}}{\text{Molar mass of solute (g mol}^{-1}) \times \text{Volume of solution (dm}^3\text{)}}$$

$$\text{Molarity} = \frac{\text{Mass of solute (g)}}{85 \text{ g mol}^{-1} \times 0.6 \text{ dm}^3}$$

$$\text{Mass of solute} = 0.25 \times 85 \times 0.6$$

$$\text{Mass of solute} = 12.75 \text{ g}$$

**(c) 800 cm<sup>3</sup> of Na<sub>2</sub>SO<sub>4</sub> solution of 1.0M**

**Given Data:**

$$\text{Molarity of Na}_2\text{SO}_4 \text{ solution} = M = 1 \text{ M}$$

$$\text{Volume of solution} = V = 800 \text{ cm}^3 = \frac{800}{1000} = 0.8 \text{ dm}^3$$

$$\begin{aligned} \text{Molecular mass of Na}_2\text{SO}_4 &= 2(23) + 32 + 4(16) \\ &= 46 + 32 + 64 \\ &= 142 \text{ g mol}^{-1} \end{aligned}$$

**Required:**

$$\text{Mass of Na}_2\text{SO}_4 = ?$$

**Solution:**

**Using the formula**

$$\text{Molarity} = \frac{\text{Mass of solute (g)}}{\text{Molar mass of solute (g mol}^{-1}) \times \text{Volume of solution (dm}^3\text{)}}$$

$$1.0M = \frac{\text{Mass of solute}}{142\text{g mol}^{-1} \times 0.8\text{dm}^3}$$

$$\text{Mass of solute} = 1.0 \times 142 \times 0.8$$

$$= 113.6\text{g}$$

**Q.4** When we dissolve 20 g of NaCl in 400 cm<sup>3</sup> of solution, what will be its molarity?

**Given Data:**

$$\begin{aligned}\text{Mass of NaCl} &= 20\text{g} \\ \text{Molar mass of NaCl} &= 23 + 35.5 = 58.5\text{g mol}^{-1} \\ \text{Volume of Solution} &= 400\text{ cm}^3 = \frac{400}{1000} = 0.4\text{dm}^3\end{aligned}$$

**Required:**

$$\text{Molarity of solution} = ?$$

**Solution:**

**Using the formula:**

$$\begin{aligned}\text{Molarity} &= \frac{\text{Mass of solute (g)}}{\text{Molar mass of solute (g mol}^{-1}) \times \text{Volume of solution (dm}^3)} \\ &= \frac{20\text{g}}{58.5\text{g mol}^{-1} \times 0.4\text{ (dm}^3)} \\ &= \frac{20}{23.4} = 0.85\text{M}\end{aligned}$$

**Q.5** We desire to prepare 100 cm<sup>3</sup> 0.4 M solution of Mg Cl<sub>2</sub>, how much Mg Cl<sub>2</sub> is needed?

**Given Data:**

$$\begin{aligned}\text{Molarity of solution} &= 0.4\text{ M} \\ \text{Volume of Solution} &= 100\text{cm}^3 = \frac{100}{1000}\text{dm}^3 = 0.1\text{dm}^3 \\ \text{Mass of MgCl}_2 &= 24 + 2(35.5) = 95\text{g} \\ &= 24 + 71 = 95\text{g mol}^{-1}\end{aligned}$$

**Required:**

$$\text{Mass of MgCl}_2 = ?$$

**Solution:**

**Using the formula:**

$$\begin{aligned}\text{Molarity} &= \frac{\text{Mass of solute}}{\text{Molar mass of solute (g mol}^{-1}) \times \text{Volume of solution (dm}^3)} \\ 0.4\text{M} &= \frac{\text{Mass of solute (g)}}{95\text{g mol}^{-1} \times 0.1\text{dm}^3} \\ \text{Mass of solute} &= \frac{0.4 \times 95 \times 0.1}{1} \\ &= 3.8\text{g}\end{aligned}$$

**Q.6** 12M H<sub>2</sub>SO<sub>4</sub> solutions is available in the laboratory. We need only 500cm<sup>3</sup> of 0.1 M solution, how it will be prepared?

**Given Data:**

$$\begin{aligned}\text{Molarity of concentrated H}_2\text{SO}_4\text{ solution} &= M_1 = 12\text{ M} \\ \text{Molarity of dilute H}_2\text{SO}_4\text{ solution} &= M_2 = 0.1\text{ M} \\ \text{Volume of dilute H}_2\text{SO}_4\text{ solution} &= V_2 = 500\text{cm}^3\end{aligned}$$

**Required:**Volume of concentrated  $\text{H}_2\text{SO}_4$  solution =  $V_1 = ?$ **Solution:****i. Determination of volume of concentrated solution:**

Concentrated solution = Dilute solution

$$M_1 V_1 = M_2 V_2$$

$$12 \times V_1 = 0.1 \times 500$$

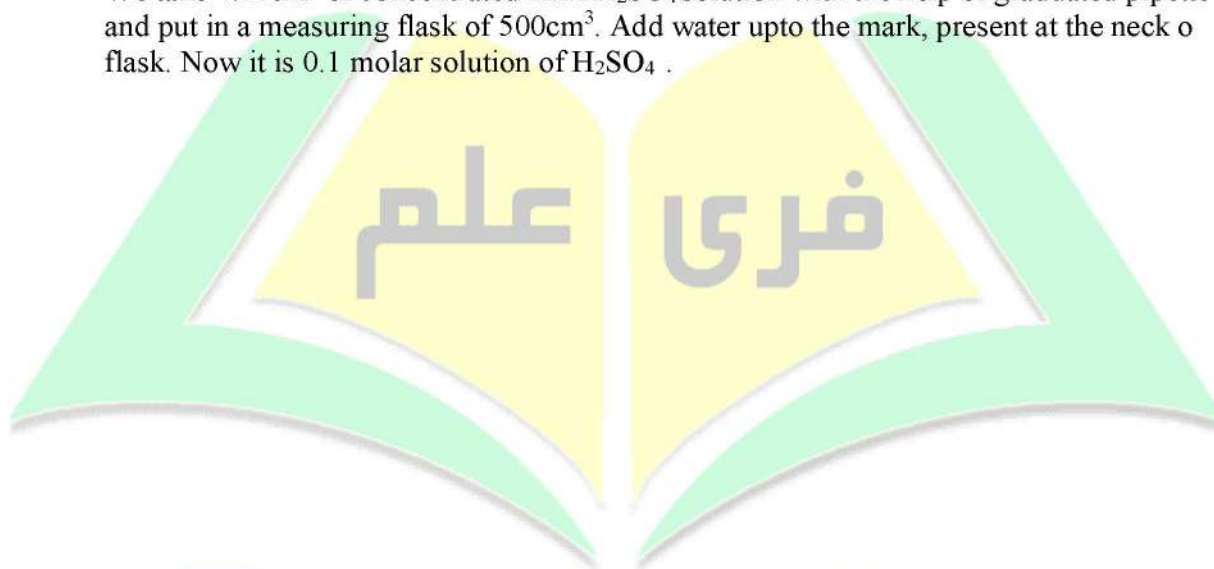

$$V_1 = \frac{0.1 \text{M} \times 500 \text{ cm}^3}{12 \text{M}}$$

Thus,

$$4.16 \text{ cm}^3$$

**ii. Preparation of solution**

We take  $4.16 \text{ cm}^3$  of concentrated  $12 \text{M } \text{H}_2\text{SO}_4$  solution with the help of graduated pipette and put in a measuring flask of  $500 \text{ cm}^3$ . Add water upto the mark, present at the neck of flask. Now it is  $0.1$  molar solution of  $\text{H}_2\text{SO}_4$ .
