

EXERCISE**EXERCISE MULTIPLE CHOICE QUESTION ANSWERS**

- How many times liquids are denser than gases?**
(a) 100 times (b) 1000 times (c) 10,000 times (d) 100,000 times
- Gases are the lightest form of matter and their densities are expressed in terms of:**
(a) mg cm^{-3} (b) g cm^{-3} (c) g dm^{-3} (d) kg dm^{-3}
- At freezing point which one of the following coexists in dynamic equilibrium:**
(a) Gas and solid (b) liquid and gas (c) liquid and solid (d) all of these.
- Solid particles possess which one of the following motions?**
(a) Rotational motions (b) vibrational motions
(c) Translational motions (d) both translational and vibrational motions
- Which one of the following is not amorphous?**
(a) Rubber (b) plastic (c) glass (d) glucose.
- One atmospheric pressure is equal to how many Pascals:**
(a) 101325 (b) 10325 (c) 106075 (d) 10523
- In the evaporation process, liquid molecules which leave the surface of the liquid have:**
(a) Very low energy (b) moderate energy (c) very high energy (d) none of these
- Which one of the following gas diffuses faster?**
(a) Hydrogen (b) helium (c) fluorine (d) chlorine
- Which one of the following does not affect the boiling point?**
(a) Intermolecular forces (b) external pressure
(c) Nature of liquid (d) initial temperature of liquid
- Density of a gas increases, when its:**
(a) Temperature is increased (b) pressure is increased
(c) Volume is kept constant (d) none of these
- The vapour pressure of a liquid increases with the:**
(a) Increase of pressure (b) increase of temperature
(c) Increase of intermolecular forces (d) increase of polarity of molecules

ANSWER KEY

1	a	4	b	7	c	10	b
2	c	5	d	8	a	11	b
3	c	6	a	9	d		

EXERCISE SHORT QUESTION ANSWERS

Q.1 What is diffusion, explain with an example?

Ans: The spontaneous mixing of particles of a substance by random motion and collisions, to form a homogeneous mixture is called diffusion.

OR

Movement of molecules of a substance from the region of higher concentration to the region of lower concentration is called diffusion.

Example: When a few drops of ink are added in beaker of water, ink molecules move around and after a while spread in whole of the beaker. Thus diffusion has taken place.

Q.2 Define standard atmospheric pressure. What are its units? How it is related to Pascal?

Ans: Standard atmospheric pressure:

It is the pressure exerted by the atmosphere at the sea level. *"It is defined as the pressure exerted by a mercury column of 760mm height at sea level". It is sufficient pressure to support a column of mercury 760mm in height at sea level.*

Units:

i. One atmosphere (1 atm): 1 atm is called standard pressure

ii. One pascal (1 Pa)

$$1 \text{ atm} = 760 \text{ mmHg} = 760 \text{ torr} = 101325 \text{ Nm}^{-2} = 101325 \text{ Pa}$$

$$\text{(as } 1 \text{ mmHg} = 1 \text{ torr}$$

$$1 \text{ Nm}^{-2} = 1 \text{ Pa)}$$

Q.3 Why are the densities of gases lower than that of liquids?

Ans: Gases have lower densities than densities of liquids. It is due to the light mass and more volume occupied by the gases. Another reason for lower densities of gases is negligible intermolecular forces among the gases molecules. On the other hand liquid molecules are closely spaced and have strong intermolecular forces.

Q.4 What do you mean by evaporation, how it is affected by surface area?

Ans: Evaporation:

"The process of changing of a liquid into a gas phase is called evaporation."

Affect of surface area on evaporation:

Evaporation is a surface phenomenon. Greater is surface area, greater is evaporation and vice versa.

Q.5 Define the term allotropy with examples.

Ans: Allotropy:

"The existence of an element in more than one forms, in same physical state is called allotropy."

Examples:

i. Oxygen has two allotropic forms i.e. oxygen (O_2) and ozone (O_3).

ii. Three allotropic forms of carbon are: Diamond, graphite and bucky balls.

Q.6 In which form sulphur exists at 100°C?

Ans: Sulphur exists in monoclinic form at 100°C

Q.7 What is the relationship between evaporation and boiling point of a liquid?

Ans: Relationship between evaporation and boiling point:

If the boiling point of a liquid is high, its evaporations slow. Because intermolecular forces are high in the liquid which have high boiling points. If boiling point is low then evaporation is high.

EXERCISE LONG QUESTION ANSWERS

Q.1 Define Boyle's law and verify it with an example.

Ans: See Q. No. 2 (Subjective Part, Long Questions Answers)

Q.2 Define and explain Charles law of gases.

Ans: See Q. No. 3 (Subjective Part, Long Questions Answers)

Q.3 What is vapour pressure and how it is affected by intermolecular forces.

Ans: See Q. No. 9 (Subjective Part, Long Questions Answers)

Q.4 Define boiling point and also explain, how it is affected by different factors.

Ans: See Q. No. 10 (Subjective Part, Long Questions Answers)

Q.5 Describe the phenomenon of diffusion in liquids along with factors which influence it.

Ans: See Q. No. 12 (Subjective Part, Long Questions Answers)

Q.6 Differentiate between crystalline and amorphous solids.

Ans: See Q. No. 15 (Subjective Part, Long Questions Answers)
